

The Actify Suite of Products

THE NEXT DIMENSION IN DIGITAL DESIGN COMMUNICATIONS™

Communicate your design data
to everyone who needs it...
wherever they are

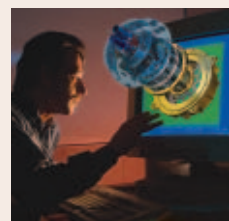

Distribute your design data anywhere—to anyone

Historically, making CAD files and related design data accessible to everyone who needs the data has been a formidable challenge. Concerns over file security, the need for specialized CAD software, multiple formats, large file sizes, and reliance on CAD professionals, coupled with the need to communicate data across multiple geographic locations, have significantly limited access.

Actify® has met these challenges. The new Actify Suite of Products form a digital design communication platform, for manufacturing enterprises and their worldwide supply chains, that allows seamless communication and collaboration of 3D and 2D product data. As a result, you enjoy significant time-, money-, and effort-saving benefits:

- **Increased productivity**—share CAD file content so it's more accessible and readily available
- **Reduced time-to-market**—add new efficiencies as well as streamline the flow of digital design data to everyone who needs it
- **Lower production costs**—improved communication means you'll reduce scrap costs by cutting down on errors and engineering change orders
- **Increased collaboration/communication**—break down costly productivity barriers between functional areas and between supply chain partners
- **Fully leveraged design data**—work with parts and assemblies, digitally organize related data, even embed CAD files in Office documents
- **Improved file security**—share your design data without distributing the original CAD files.

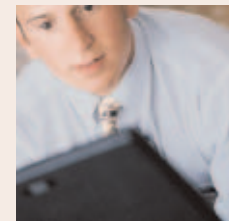

SpinFire Professional

The flagship of the Actify Suite of Products, SpinFire™ Professional, streamlines communication of CAD files and associated data by enabling users to save and share this design data as a compact .3D file.

Engineers, individuals with quoting and estimating responsibilities, sales and marketing, and IT can use SpinFire Professional, and its .3D WorkSpace feature to electronically organize and publish associated design files and documentation. They can include CAD files from diverse native CAD systems, then add notes and other related

documents, hyperlinks, multiple models, plus mark-ups and measurements. Every .3D file created can then be easily, efficiently shared with users across your enterprise—without distributing original CAD files and without recipients needing CAD system access.

Actify Publisher

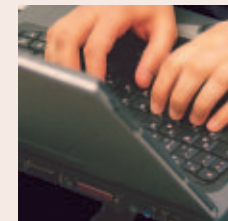

Actify Publisher™ centralizes and automates batch publishing of native 2D and 3D CAD files to Actify's user-friendly, compact .3D file format. Its dashboard interface allows exceptional control over all aspects of the publishing process.

As a result, Actify Publisher simplifies access to design data files across the enterprise. It also improves publishing accuracy and consistency. By providing tools to manage and monitor the

automated publishing process, it eliminates human errors typical of manual publishing.

Users also notice improved efficiency. By streamlining publishing of large native CAD file archives, and ensuring the timeliness of conversions, users save both time and money compared with manual CAD data management.

Actify Publisher is especially useful for document management and project coordination personnel.

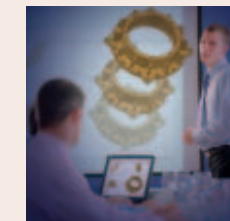

SpinFire for Microsoft Office

Using SpinFire™ for Microsoft® Office, you can embed interactive 2D and 3D CAD data directly into your Office documents.

By making design data accessible to almost every desktop where it can be leveraged, workers

throughout the organization can perform their jobs better and more efficiently.

SpinFire for Microsoft Office is especially useful for personnel responsible for quoting and estimating, developing technical publications, preparing design presentations, or accessing meta data from CAD files.

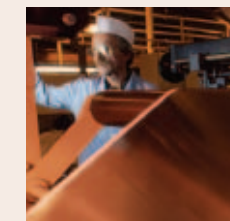

Actify Server

Actify® Server is a centralized, secure .3D file repository. It stores, manages, and controls access to design files in a secure, central location. By

providing access to .3D file data, even outside the firewall, Actify Server facilitates extensive communication and collaboration. It supports secure file access to external employees, external offices, even partners and vendors. It is especially useful for IT Managers serving SpinFire Professional users, group managers of estimators, estimate coordinators, and others in similar positions.

Finally, Actify Server is highly cost-effective: one installation serves your entire enterprise.

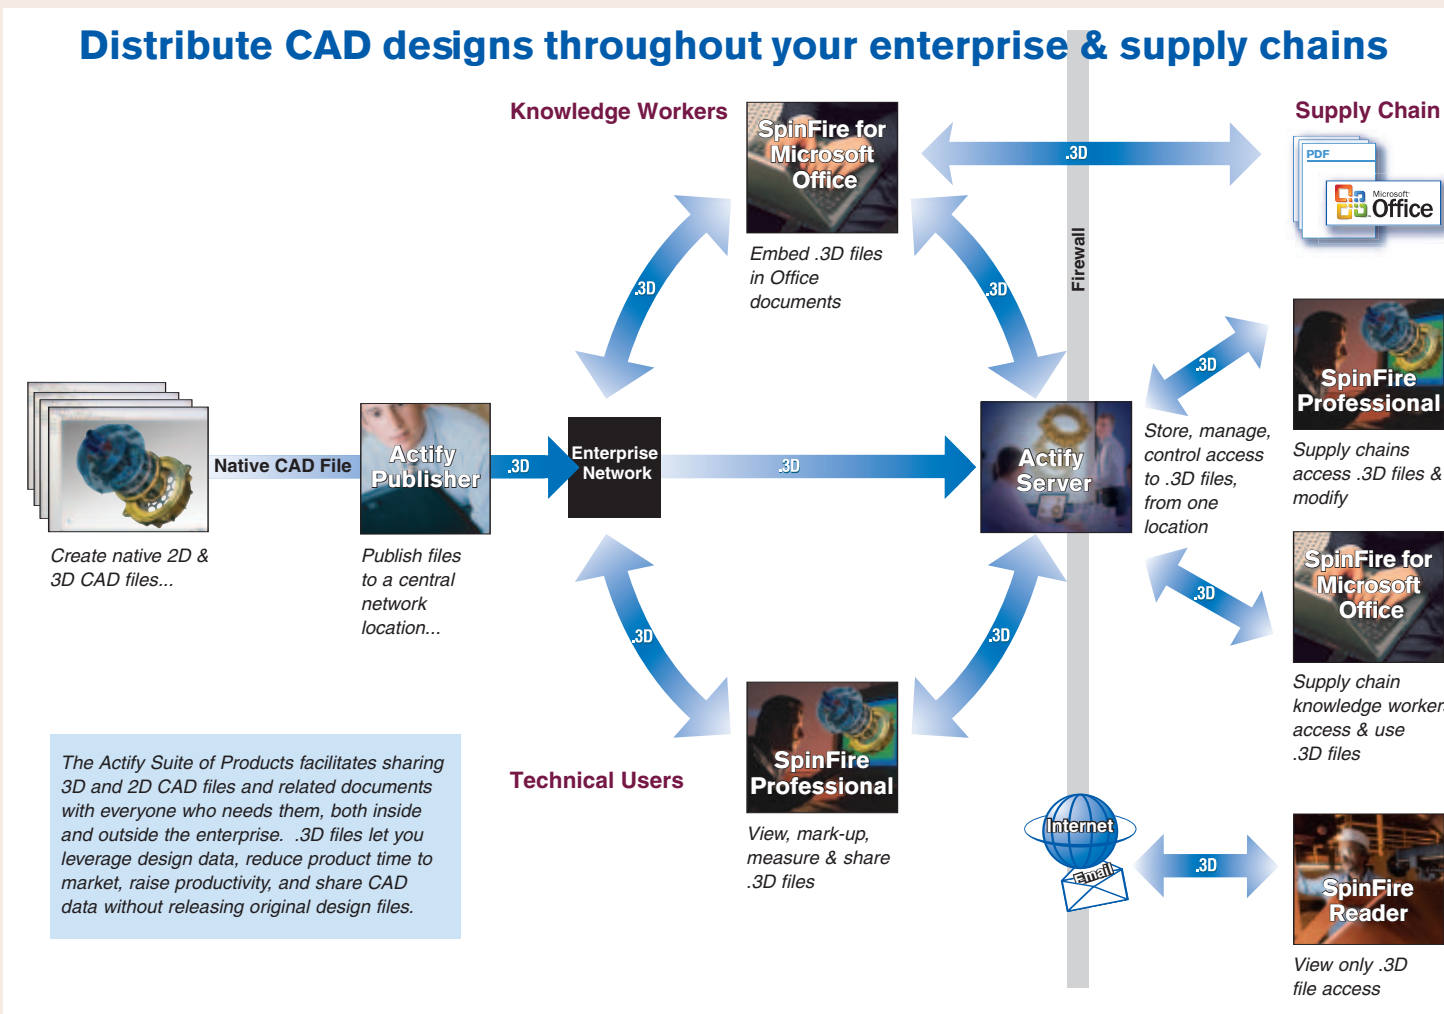

SpinFire Reader

SpinFire™ Reader provides view-only access to your .3D design files—at no cost. An easy-to-use solution for both supply chain and casual users, it is ideal for people such as shop floor workers, managers, and customers, for whom viewing CAD data is enough.

SpinFire Reader lets you easily access and review .3D-formatted design data files. So, users can perform job responsibilities, understand products better, improve their job tracking, and more.

About Actify

Actify is the world leader in providing access and usage of 3D and 2D CAD files and product design data—from all major CAD systems—to the widest possible audience, without requiring complex infrastructure or expensive CAD software. Actify's proprietary technology enables enterprise workers at every level, in every discipline, plus vendors and suppliers, to utilize product design and development data in performing their responsibilities.
