

ActAutoCAD Build 906 Release Notes

March 8, 2005

Importers Released

- ActAutoCAD

Version Support & Windows Compatibility

Importer	Version Support	Windows Compatibility
ActAutoCAD	Up to AutoCAD® 2005	NT, 2000, 2003, XP

Improvements/Bug Fixes

-
- ActAutoCAD** The following apply to **DWG** importing:
- Special symbols such as those in Feature Control Frames, MText, and Dimensions now load properly. This applies to symbols generated by either AutoCAD or Mechanical Desktop.
 - Text with styles attached to it (such as bold or italics) is rendered properly.
 - In XRef files (files which reference external databases) if the main file has 2D entities and the external files which it refers to are in 3D, the importer now correctly determines if any of the xrefs are in 3D and displays the model appropriately.
-

New Configuration Filter Options

-
- ActAutoCAD** The following options apply to **DWG** importing:
- **Viewing Options**—A new set of viewing options lets a user determine whether to render the model in 3D Space or Paperspace (2D), or have the importer Auto Detect how to perform the importing. Auto Detect is the default option.
 - If a file has invalid extents for the model, **Auto Detect** may have trouble determining the proper way to render it. In such cases, the user should set the viewing option to **Render Model in 3D Space** or **Render Model in Paperspace**.
-
